Some simple models based on Tonmya sales

What are we doing here? - Just trying to get a grasp on the rate of increase and projecting out if that rate continues. It is not necessarily realistic to take it out as far as projections provide. Nothing here should be regarded as investment advice. I am not a financial analyst or advisor.

Sales Projection - at weekly growth rate - *exponential model*

```
Formula: sales ~ a * (1 + r)^wk

Parameters:
   Estimate Std. Error t value Pr(>|t|)
a 141.13791   21.16024    6.67 1.05e-06 ***
r   0.08965    0.00830   10.80 2.92e-10 ***
---
Signif. codes:  0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1

Residual standard error: 103.6 on 22 degrees of freedom

Number of iterations to convergence: 9
Achieved convergence tolerance: 7.06e-06
```

I think we can see some trending on a monthly basis. Reporting doesn't match a monthly basis, but we can see if four-week intervals are interesting.
